

Gym Management System - Project Proposal

1. Introduction / Problem Statement

The current management of gym operations is often handled manually or through disconnected systems, which can lead to inefficiencies and difficulty in tracking key activities such as memberships, sessions, and payments.

Our proposed system, a Gym Membership and Training Management System, aims to provide a centralized and structured database solution to manage the core operations of a gym. The system will support member registration, trainer management, session scheduling, membership subscriptions, and payment tracking, ensuring efficient data storage, retrieval, and maintenance.

2. Objectives

- Design a structured database for managing gym operations
- Eliminate redundancy and improve data consistency
- Support efficient tracking of members, trainers, and sessions
- Simplify subscription and payment management
- Provide a scalable foundation for future expansion

3. Scope of the System

- User Management: Store user accounts and support roles (Member, Trainer)
- Member Management: Maintain member details and track activity
- Trainer Management: Store trainer profiles and specialties
- Membership Plans & Subscriptions: Define plans and track subscriptions
- Session Management: Schedule sessions and assign trainers
- Booking System: Allow members to book sessions
- Attendance Tracking: Record attendance for sessions
- Payment Management: Track payments and status

4. Target Users

- Gym Staff / Administrators
- Trainers
- Members
